About the course Make AI for beginners

Course Presenter : Pavan Lalwani

Make AI for beginners, in this course is designed to introduce newcomers to the exciting world of artificial intelligence and guide them through building their first AI projects. Youâ€™ll start by understanding what AI is, its different types, and its applications in various fields such as business, healthcare, education, and entertainment. The course covers essential AI concepts like machine learning, deep learning, and natural language processing in simple terms. Youâ€™ll learn how to use beginner-friendly tools and platforms, both with and without coding, to create AI models. Step-by-step examples will walk you through collecting and preparing data, training models, and testing them. Youâ€™ll also explore practical projects such as chatbots, image recognition, and automation tools. By the end, youâ€™ll have the skills and confidence to start building basic AI applications and a solid foundation to advance into more complex AI development.
